

Do you know the most
critical equipment in your plant?
Do you have a current maintenance strategy?
ACOEM ADVISOR can help.

Keep your critical machines running with **ACOEM ADVISOR**

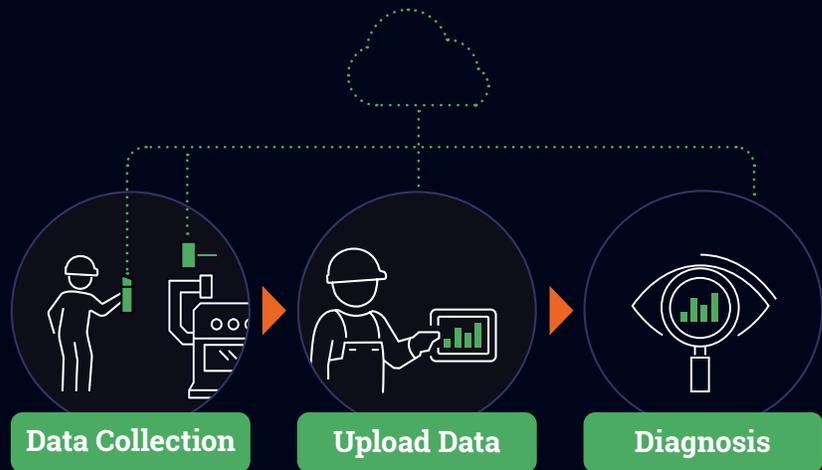

Vibration data is collected with our help. Data is then uploaded to your ADVISOR interface. Our team of experts will do the analysis and let you know your machine condition plus next steps within 48 hours.

How ACOEM ADVISOR Works

YOU DON'T HAVE TO BE AN EXPERT

- Determine which rotating assets you would like to monitor and enter the machine specs in the ADVISOR interface.
- We ship the loaned Falcon vibration data collection tool to you.
- Based on the specs you provide, we pre-build your assets and you load them onto your Falcon.
- Using the Falcon, collect vibration data on your desired machines.
- Simply upload the collected data to the ADVISOR interface.
- A vibration expert from ACOEM will remotely analyze all of your collected data.
- Within 48 hours, you will be informed with the condition of your machines via the ADVISOR interface.

COMMON MACHINE FAULTS ADVISOR CORRECTS

Bearing Defects

Cavitation

Gear Wear

Misalignment

Structural Resonance

Unbalance

ADVISOR Dashboard at a glance

The ADVISOR interface was built with the end-user in mind. The web-based interface allows users to create, organize, and manage a database of their rotating machinery. In addition to monitoring machine condition, the user is supplied with actionable recommendations by ACOEM's vibration experts, allowing maintenance to confidently fix the root of the problem.

Providing professional service at the level of expertise you need

MAKE INFORMED DECISIONS.

The web-based interface allows users to create, organize, and manage a database of their rotating machinery. In addition to monitoring machine condition, the user is supplied with actionable recommendations by ACOEM's vibration experts, allowing maintenance to confidently fix the root of the problem.

COLLECT ACTIONABLE DATA.

With the ADVISOR program, there's no need to already have a vibration data collection tool on hand because we will provide you with a OneProd Falcon. The Falcon is a portable vibration data collector with a touch screen display, wireless triaxial sensor, and a multitude of built-in features such as a stroboscope, pyrometer, and camera.

EXPERT ADVICE, ON YOUR TERMS.

We will always be just a click away from being able to diagnose your machine conditions. Instead of hiring more people for specialized jobs, you can rely on us to analyze your data, identify machine problems, suggest actionable recommendations, and assess risk.

PAY FOR WHAT YOU NEED.

- Expertise Needed? NO.
- Upfront Payment? NO.
- Need to purchase a tool? NO.
- Low monthly Operational Cost? YES.
- Clear actionable data to correct issues? YES.
- 48 hour turnaround time? YES.
- Training and Educational Tools? YES.
